Invisible Innovation

C.H.I.C. and NP SUPRA

towards a new generation of windows

A new generation of windows calls for a new generation of hardware: C.H.I.C. and NP SUPRA handle with exclusive technology Giesse NP. The result is a revolutionary system of concealed hardware for Side-Hung and Tilt-and-Turn windows through which it is possible to create a new kind of window, with reduced front section and hinges which are totally concealed within the profile.

C.H.I.C.

Concealed.Hardware.Innovation.Components

Complete concealed hinge system for Side-Hung and Tilt-and-Turn windows.

CHIC

NP SUPRA

The innovative driving system that combines the aesthetics of a handle with the ease of assembly of a cremone.

C.H.I.C.

Concealed.Hardware.

Innovation.Components.

The world of the aluminium window is evolving towards an aesthetically and technologically advanced window, with ultra slim profiles and concealed hardware.

The possibility to minimize the dimensions of both sash and frame profiles translates into a more modern, architecturally innovative appearance, but it also means more daylight and improved thermal performance, thanks to the increased glazed surface in the same window size.

180°

180° Opening

C.H.I.C. allows 180° opening of the sash for both Side-Hung and Tilt-and-Turn windows.

Simple, Quick and Easy Assembly

Reduced number of components and assembly stages.

3D Hinge Adjustment

3D adjustment system allowing height, lateral and compression adjustment, even after installation on site.

Optimised Stores Management

The color choice is no longer a problem. Hidden inside the profile, C.H.I.C. eliminates completely the requirement for coloured finishes thus simplifying the organization of the warehouse.

**100
Kg**

100 kg Load Capacity

This maximum load capacity suits the majority of the application requirements for housing concepts, both residential and commercial.

For Side-Hung and Tilt-and-Turn Windows

also with Logica Tilt-First function

C.H.I.C. was designed to satisfy the requirements of all situations which call for the installation of Tilt-and-Turn windows, combining a modern design with quick and simple installation and the possibility to open the window 180°.

Side-Hung Window

Plus

- 180° sash opening
- 100 kg load capacity
- 3D hinge adjustment
- Adjustable fastening element

Tilt-and-Turn Window

Plus

- 180° sash opening
- 100 kg load capacity
- 3D hinge adjustment
- Micro ventilation as standard
- Same product for Standard and Logica Tilt-First

Standard and Logica Tilt-and-Turn Functions in a Single Mechanism

Logica is a solution particularly well suited to public buildings and all situations where the sash must be prevented from opening to the full extent. Without the key, it is only possible to open the sash as a Bottom-Hung window for ventilation purposes.

Micro Ventilation as Standard

Simply turning the handle to 135° opens the sash by only a few millimeters, allowing air to flow from the inside to outside and vice versa, to minimize condensation inside the building.

NP SUPRA

modern and elegant design

NP Supra is the innovative handle that requires a minimal machining on the profile, thanks to the miniaturization of the internal mechanisms and an innovative fixing system.

Traditionally, window fastening systems are divided into two types: cremones and window handles. The cremone can be easily installed with minimal work required on the profile, however it has an aesthetical downside: the dimensions of the case do not allow for clean, minimalist design.

The window handle instead allows more appealing and diversified designs, but it requires complex machining on the profile and especially accurate fitting.

Simple Machining and Assembly

NP Supra does not require any prior machining of the profile other than the three fixing holes. The mechanism rests on the front of the channel and is quickly fixed to the profile with two special screws.

Reduced Dimensions for More Pleasant Visual Impact

Only with NP Supra it is possible to reduce the aluminium profile for the benefit of the glazed surface for a modern, stylish design.

For Side-Hung and Tilt-and-Turn Windows

The NP Supra range offers a choice of two handle styles (Prima and Asia) and two devices, for Side-Hung and Tilt-and-Turn windows.

Only Three Holes

Giesse NP (Non Plus) technology aims to minimize the amount of machining required on the profile, to allow quick, simple fitting of window hardware. With the NP punching press, the only machining required for installation of NP Supra is achieved in just one simple high speed operation.

Tilt-and-Turn

Single Sash

Description	Item	Notes	Pcs
